

BURSA GUARD N-B-R

Merial Select

Bursal Disease-Newcastle Disease-Bronchitis-Reovirus Vaccine, Standard & Variant, Mass & Ark Types, Killed Virus

U.S. Vet. Lic. No.: 279

Composition: This product is a suspension of bursal disease and Newcastle disease, bronchitis and reovirus viruses emulsified in oil. The following strains are utilized:

Bursal - Standard and Variant E

Newcastle - LaSota

Bronchitis - Mass and Ark

Reo - 1133, 2408, MSB

Bursal Virus Origin: Bursal Tissue 100%

Newcastle, Bronchitis, Reovirus Origin: Chick Embryo 100%

Indications: Use in chicken pullet/hens to protect them against Newcastle disease and bronchitis and to stimulate passive immunity in their progeny against bursal disease and reovirus.

Directions: Warm vaccine to room temperature. Shake well. Inject 0.5 mL subcutaneously using aseptic technique. Vaccinate at 12-13 weeks of age and repeat at 20-21 weeks of age. Birds should be primed with live reovirus, bronchitis and bursal disease vaccines at least 4 weeks prior to the first use of this product.

Precaution(s): Store in the dark between 36-45°F (2-7°C). Do not freeze. Use entire contents when first opened.

Caution(s): For veterinary use only.

Warning(s): Do not vaccinate within 42 days before slaughter.

Humans injected with this vaccine should seek immediate medical attention. Advise medical personnel that the vaccine is an oil emulsion type.

Presentation: 10 x 1,000 dose (500 mL) bottles.

NAC No.: 11050062
